**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-47 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ledger (5,291,269) in view of Cabib et al (5,856,871) and Finland reference (*ImSpector* imaging Spectrograph brochure including specifications, **Spectral Imaging Ltd.**,) (of record).

Ledger discloses a method and apparatus for measuring the thickness of a thin film layer in which the thickness is determined on the basis of interference fringe pattern images. Ledger does not teach that an imaging spectrometer for deriving a plurality of one-spatial-dimension spectral images. However, such a feature is known in the art as taught by Cabib et al and Finland reference. Cabib et al teaches that an imaging spectrometer or spectral imager using for resource mapping of the earth surface from airplanes and satellites could be used for film thickness mapping (column 2 lines 8-23). Furthermore, Finland reference teaches that imaging spectrometer is a one-spatial-dimension imaging spectrometer (figure in page 1). Those of ordinary skill in the art at the time the invention was made to replace the imaging detecting unit of Ledger by a one-spatial-dimension imaging spectrometer as taught by Finland reference because

Cabib et al suggests that such the imaging spectrometer could be used in the field of semiconductor processing.

***Response to Arguments***

The declaration under 37 C.F.R 1,132 dated 12/16/02 has been considered; however, it is insufficient because, as mentioned above, **the Cabib et al reference teaches that the spectral imager or imaging spectrometer not only use for resource mapping of the earth surface but also for film thickness mapping.**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Greenberg et al (5,042,949) teaches the use of an imaging spectrophotometer for measuring film thickness (column 5 lines 42-46).
